Group 2: Artificial Intelligence in Everyday Life

Leonida Ilijoska and Jan Bartos

November 5, 2026

1 Assigned Leaders and Team Members

Group Leaders

Leonida Ilijoska
Jan Bartos

Git Leader

Francesco Ardei

CSS Leaders

Andrea Dell'Agnello
Alesandro Rohrwasser

Topic Leaders

Giacomo Demartini
Eros Butti
Giulia Mettifogo
Eliot Boniface

Team Members

Mark Camarilla
Luca Clivio
Mohamed El Bayad
Daniele Gabriele Gambarota
Fabio Giandomenico
Alessio Giugno
Lexie Jowi
Fariba Karimi
Changlong Ma
Eleonora Marichi
Minh Nguyen
Kevin Ortiz Fernández
Emanuele Tonazzo
Minh Quan Tran

2 Main Groups and Their Topics

2.1 Introduction to AI

Led by:

Topic Leader:
Eros Butti
Team Members:
Alessio Giugno
Luca Clivio
Mark Camarilla

Main Topics Covered

History of AI and Basic Concepts

Detailed Plan

This is what the articles will cover

1. What Is Artificial Intelligence?
    - Definition and Key Terms
    - Types of AI (Narrow vs General)
2. The History of AI
    - Key Milestones: from Turing to ChatGPT
3. How Does AI Work?
    - Machine Learning
    - Neural Networks
    - Data and Training
    - How Chatbots Work
4. Artificial Intelligence Today
    - AI in Our Daily Lives
    - Generative AI (text, images, music)
    - Using AI Well
5. The Future of AI
    - Upcoming Trends
    - AI and Jobs
    - General AI: Hype vs Reality

2.2 AI Technologies

Led by:

Topic Leaders:
Giulia Mettifogo
Giacomo Demartini
Team Members:
Daniele Gabriele Gambarota
Fabio Giandomenico

Emanuele Tonazzo
Minh Quan Tran
Minh Nguyen
Mohamed El Bayad

Main Topics Covered

Application of of AI and Robotics

Detailed Plan

This is what the articles will cover

1. Introduction (short) of applications of ai in our life (what we are going to talk about next): they can be divided in different sub categories: interaction with our surroundings (with the world, with human voice, with human body and with human psyche) (volunteer)
    - Interact with the world: computer vision - what is it and how it works and examples (Mohammed)
    - Interact with human voice and language: language technologies: introduction and text based voice based (Daniele)
    - Interaction with human psyche: recommendation systems (Tran or Nguyen)
    - Interact with human body (or another application of choice): examples of ai technologies in health industry or other industries of choice (Tran or Nguyen)
2. Robotics (how everything said before interacts to create something bigger):
    - Introduction: what a robot is and how ai is used (Giacomo)
    - Robots in controlled spaces: household, warehouses,... (Fabio or Emanuele)
    - Robots in the open world: autonomous driving, drones, deliveries, rescue,... (Fabio or Emanuele)
    - World building and its use in robot testing (Giulia)

2.3 Impacts

Led by:

Topic Leader:
Eliot Boniface
Team Members:
Changlong Ma
Eleonora Marichi
Lexie Jowi

Main Topics Covered

Economy, Environmental, Geopolitical and Societal Impact

Detailed Plan

This is what the articles will cover

1. **Impact in the economy** how it impacts certain jobs which one have to adapt or will be replaced what are the new sectors that will be created.

2. **Impact in our society** how it affects our daily lives how we think, how we interact with each other.

3. **Environmental impact**, what are the natural resources consumed, how does it impact wild life, energy comsuption and how it will impact the use of this technology

4. **Geopolitical impact**, how does it impact the political relationships between countries in different parts of the world, how they will trade, talk and cooperate and this matter.

3 Git

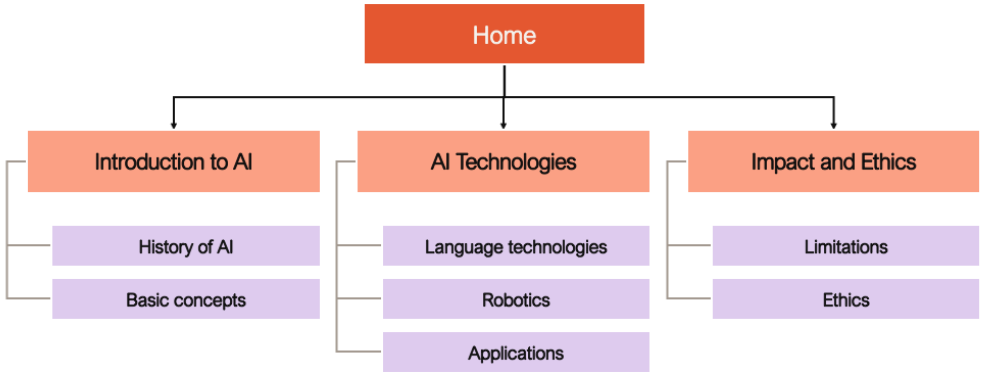

My proposal for how the git should be structured is to have branches for each group of topics inside the HTML directory (Introduction to AI, AI Technologies and Impacts) where each member can add their files without push or

merge conflicts. The internal structure of each branch should match the organization of its contents. In the end, I believe this is up to the Francesco and Jan.

4 CSS

4.1 Website structure

The website's structure is like this:

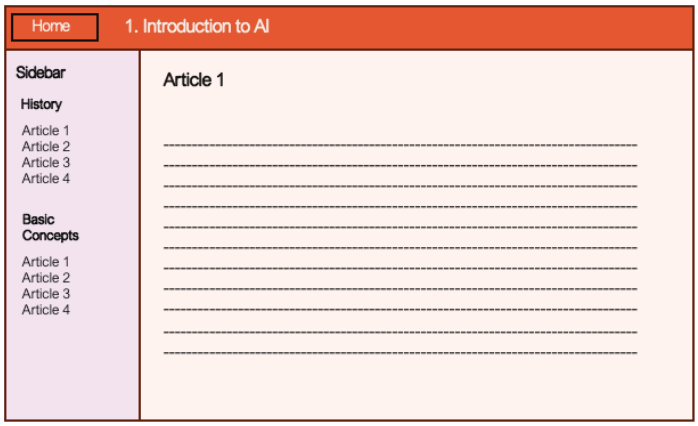

We have a home page which contains the links to the 3 groups. When clicked, the links should send the user to the first article of that group.

The article page should look like this:

The header contains a home button and the title of the group. If the user wants to choose a different group, then he has to go back to home. The subtopics of the group are divided and organized in the sidebar.

The Homepage layout is yet to be decided, but we are getting close. The homepage should be the most gimmicky of all pages, where it showcases the css leaders skill.

4.2 Style

The overall look of the website should be sleek and simple, but to have interesting widgets or effects.
As of now, we have decided that each group will have a color assigned to it (ex: Impacts article pages will have a red color scheme), so that it will be easier to know on which group you are in. The details of this will be covered by the css leaders.
One proposal from Andrea is to take some elements of the first presentation and incorporate it in the website's style (ex: the font).

5 Workflow

Go/No-Go — Wed 4 Nov
Decide on the roles and the topics. Make the presentation and repository. **Done**

In the meantime while the css leaders are working on a template, the team members and the topic leaders can start writing the content (in Word, notes, wherever, just have them written somewhere)
IMPORTANT: Obviously I don't expect 4 handwritten articles in one week and I saw in gproject.pdf that "summarization of textual content" is allowed. So you can use ai for text generation.

Midway Milestone — Wed 11 Nov
Most of the content (article pages) should be done (preferably all). Start making the html pages and connect the links. Make the presentation of what we have done so far.
Final Milestone — Wed 18 Nov
Html code should be finished. Links connected. After this deadline we cannot make any changes. **Final Presentation — Wed 25 Nov**
Final presentation of the project.
